WHISKY
and how to appreciate it…

The On the Rocks
Adding several ice cubes into your whisky glass, will quickly drop the beverages temperature

however, it also will dull the flavors at the same time.

We would recommend to only use a single small cube first and add more till you find your perfect combination.

The Water
We think that spring water or distilled/deionized waters are best. However also any natural still or “poor” mineral waters are suitable to open up your whisky differently and to reduce the strength of alcohol in the glass.

The Stone
Whisky Stones are cubes of solid refrigerated soapstone that will chill your liquor without diluting it. They are odorless and tasteless. So, adding these stones to your favorite drink, they will only chill the whiskey without affecting its original taste.

Straight
The way it was meant to be, enjoy your whisky at room temperature, straight up (neat) with no water, no ice and no change in temperature.

Cheers!

Most importantly, we encourage you to experience, explore and experiment. Try different ways and

then decide what suits you best! Remember, your palate tells you what is right for you.
